

Modern Endpoint, Infrastructure Hardening & IRR Recovery Services

Senior subcontract and delivery support for MSPs, Microsoft partners, security firms, and enterprise IT teams

John Jankowski | EndpointMagician.com | jas@endpointmagician.com

I help partners and enterprise teams stabilize, modernize, harden, and recover Microsoft endpoint, identity, and infrastructure environments after operational drift, failed migrations, or security incidents.

Service Pillars

Pillar	High-Value Offers	Buyer Pain Solved
Modern Endpoint	Intune optimization, Autopilot rescue, Windows 11 readiness, MECM-to-Intune, Jamf health check.	Endpoint sprawl, failed enrollment, policy duplication, migration risk, weak device compliance.
Infrastructure Hardening	Microsoft endpoint, Windows Server/DC, AD/Entra ID, VMware, Citrix CVAD hardening.	Unclear baselines, audit pressure, legacy protocols, privileged access exposure, risky server/VDI settings.
IRR Recovery	Endpoint/identity recovery assessment, post-incident stabilization, recovery-to-hardening roadmap.	Ransomware recovery gaps, broken device trust, unmanaged endpoints, identity exposure, emergency remediation.
MSP Delivery Support	Subcontract delivery, retainer support, fractional architect, escalation resource, client-ready reports.	Insufficient senior bench, delivery backlog, client escalation, lack of repeatable deliverables.

Flagship Engagements - Public One-Pager (No Pricing)

Engagement	Use When	Client/Partner Outcome
Intune Optimization Assessment	Client has Intune drift, enrollment issues, policy sprawl, compliance gaps, or weak endpoint reporting.	Prioritized findings, policy rationalization roadmap, executive summary, and engineer-ready remediation plan.
Microsoft Endpoint Hardening Assessment	Client needs Microsoft/CIS-aligned endpoint security review with pilot-safe remediation guidance.	Baseline mapping, control gaps, risk-ranked actions, and safe deployment sequence.
IRR Endpoint & Identity Recovery Assessment	Client is recovering from ransomware, compromise, emergency hardening, or unmanaged endpoint exposure.	Recovery state review, identity/endpoint risk map, stabilization steps, and 0-90 day recovery roadmap.
Full IRR Recovery-to-Hardening Program	Client needs endpoint, identity, server, Defender/CA, and baseline recovery program.	Recovery-to-modern-management strategy with executive roadmap, validation plan, and SOP/runbook package.
MSP Endpoint / IRR Escalation Retainer	Partner needs senior bench strength without full-time headcount.	Ongoing escalation, architecture review, client-call support, and delivery capacity.

Best Partner Fit

Partner Type	Where I Fit
MSP / Microsoft Partner	Senior endpoint, Intune, Autopilot, Windows 11, hardening, and client-delivery bench capacity.
Security Firm / DFIR / MDR	Microsoft endpoint, identity, Intune, AD/Entra ID, Defender, and recovery-to-hardening support after incident response.
Enterprise IT	Client-ready findings, prioritized remediation, pilot strategy, and engineer-ready SOPs/runbooks.

Public-facing capability sheet. Pricing is scoped privately based on environment size, urgency, access, and remediation depth.
